

Study on Guidance on Methodologies to Assess the Performance of Vaccination Programmes

To develop guidance on methodologies for monitoring the performance of vaccination programmes in EU Member States allowing them to maximise programme impact.

Literature Review

Ongoing

Our expert team has screened over 7,000 academic papers from across the EU and extracted relevant information for the literature review. We are currently screening grey literature and are searching for more.

→ Please send us any country reports, policies or strategy papers around vaccination programme monitoring that you think would be useful for the study.

Survey

Ongoing

We have received very insightful survey responses from Belgium, Croatia, Cyprus, Denmark, Estonia, Hungary, Lithuania, Malta, Netherlands, Slovakia, Slovenia, and Spain. The deadline for the survey has been extended to 1st February.

→ Please do complete the survey if you are engaged in vaccination programme monitoring in a Member State in any way. You can also use the survey to add further grey literature.

Interviews

Coming soon

The interview programme is almost ready for launch.

→ Please get in touch to register your interest or tell us who else we should invite.

A big thank you to all the countries that have taken part in the survey so far!

→ Contact us about any activities, register interest for interviews or send us useful documents at: vaccinationprogrammeseustudy@technopolis-group.com

→ Complete the survey about monitoring in each Member State at: <https://technopolisgroup.limequery.org/536995?lang=en>
